TREE & HEDGE PLANTING

TREATED CROSS BAR SUPPORT

Pressure-treated timber cross bars designed to securely connect two or more stakes in double or multi-stake tree support systems. Available in two sizes, these supports provide a reliable fixing point for tree ties, belting, and rubber cushions, helping to stabilise young trees and protect them from wind damage.

As a natural wooden product, each cross bar support may feature knots, cracks, and slight size variations. These characteristics occur naturally as timber dries, swells, or contracts depending on environmental conditions.

Knots & Cracks: Common in all timber products; these are natural and not defects.

Dimensional Variance: Moisture and heat can cause expansion or shrinkage in size

Installation Breakage: When fixing or hammering, pieces may break at weak points like knots

We recommend ordering 10–20% more than required to account for natural variation and installation breakages. Returns or replacements are not offered for timber affected by these normal characteristics.

BENEFITS

- Pressure-Treated Timber for long-lasting outdoor use
- Connects Multiple Stakes – Ideal for forming a double or triple stake system
- Attachment Point for Tree Ties & Belting – Secure trees with ease using blocks, cushions, or belts

INFORMATION

Material: Pressure-treated timber

Finish: Natural Wood

Applications: Supporting newly planted trees in multi-stake systems

Compatibility: Can be used with stakes and belting to secure trees to reduce wind damage.

SPECIFICATION

SKU	Size
212303	Treated Cross Bar Support - 900mm x 38mm x 75mm FSC
214505	Treated Cross Bar Support - 900mm X 25mm X 75mm FSC
